EDUCATION

University of California, Santa Barbara

Santa Barbara, CA

Bachelor of Science in Computer Science

Sep 2024 – Jun 2027

- GPA: 3.76/4.0 | Dean's Honors (2024–2026)
- Relevant Coursework: Data Structures and Algorithms, Machine Learning, Computer Networking, Computer Architecture

PROJECTS

DripChain | *TypeScript, Next.js, Supabase, PyTorch, Flask, PostgreSQL, Pinata*

- Built and demoed a full-stack decentralized fashion marketplace on Solana at SB Hacks 2026, using Next.js for wallet-based authentication and peer-to-peer crypto transactions.
- Engineered a PyTorch recommendation engine using EfficientNet-V2 and KNN over image feature vectors, personalizing user feeds based on interaction history with a 65% Top-5 retrieval accuracy.
- Designed a Flask REST API + Supabase backend with PostgreSQL for data management and Pinata for decentralized image storage, automating the full listing-to-sale lifecycle.

Agentic Travel Planner | *Next.js, FastAPI, AWS (Bedrock, DynamoDB, S3), LangGraph, ChromaDB*

- Built a full-stack chat UI with Next.js and FastAPI, persisting preferences in DynamoDB, archiving itineraries to S3, and validating live plans via OpenWeatherMap.
- Architected a self-correcting LangGraph agent in Python that autonomously resolves budget and weather constraint violations via iterative re-drafting loops over Claude Haiku 4.5 (AWS Bedrock) API calls.
- Built a RAG pipeline using ChromaDB and semantic embeddings to ground LLM recommendations in curated travel data, ensuring high-fidelity, location-specific outputs.

FlightLog | *TypeScript, Next.js, Tailwind CSS, Supabase, PostgreSQL, PWA*

- Built a mobile-first PWA for pilots to log flights, designed around a working airline pilot's post-flight workflow to minimize entry time.
- Engineered entry-speed features including one-tap flight duplication and history-based quick-picks and defaults, cutting repeat-flight entry to 4 taps.
- Implemented Supabase Auth with row-level security for per-user isolation, offline logging with background sync, and automatic aggregation of hours by category (PIC, SIC, night).

EXPERIENCE

Treasury Intern

Apr 2026 – Present

Association for Computing Machinery (ACM)

Santa Barbara, CA

- Coordinate end-to-end event funding logistics, including room sourcing, quote collection, funding request submission, finance board presentation, and post-event reimbursement processing.
- Collaborate with leadership in weekly officer meetings to optimize club operations and align programming with emerging industry trends.

AI Data Trainer

May 2025 – Aug 2025

DataAnnotation

Remote

- Evaluated and scored 500+ LLM-generated outputs against accuracy, safety, and coherence rubrics, directly informing reinforcement learning fine-tuning pipelines.
- Labeled and validated 100+ datasets spanning NLP and classification tasks, improving training data quality for production ML models.
- Identified recurring hallucination patterns and logic failures across model outputs, documenting findings that shaped updated evaluation and prompting guidelines.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, HTML/CSS, Java, SQL (Postgres)

Developer Tools: AWS (Bedrock, DynamoDB, S3), Git, Visual Studio Code, Figma, Supabase, Ollama, Claude Code

Frameworks: Next.js, React.js, Node.js, Flask, FastAPI, PyTorch, Tailwind, Recharts

Libraries: LangGraph, Anthropic API, Boto3, ChromaDB, Pandas, Numpy, Matplotlib, Scikit-learn
